

5.6 Exploring Properties

Properties of Triangles and Quadrilaterals

Distance $\sqrt{(x_2-x_1)^2 + (y_2-y_1)^2}$

Midpoint $(\frac{x_1+x_2}{2}, \frac{y_1+y_2}{2})$

Parallel $m_1 = m_2$
 Perpendicular $m_1 = -\frac{1}{m_2}$
 $m = \frac{y_2-y_1}{x_2-x_1}$

Diagonals Distance $\sqrt{8^2+5^2} = \sqrt{8^2+5^2}$

Diagonals are equal in length
 Diagonals have same midpoint

In Parallelogram same midpoint
 Rectangle
 Rhombus
 Square

Not same midpoint

kite - diagonals are perpendicular

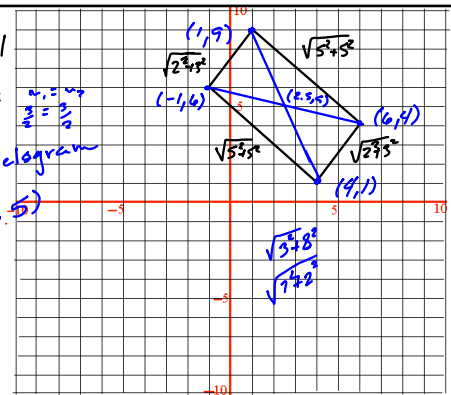

kite not same distance
 not the same midpoint

$\frac{a-b}{1-b} = -1$

$m_1 = m_2$
 $-1 = -1$

Parallelogram

(2.5, 5)

Triangles
midsegments

connect midpoints
of 2 sides

midsegment is parallel
to the side its not connected
to.

Length of the
midsegment is
half the length of
the base
