

Segment addition

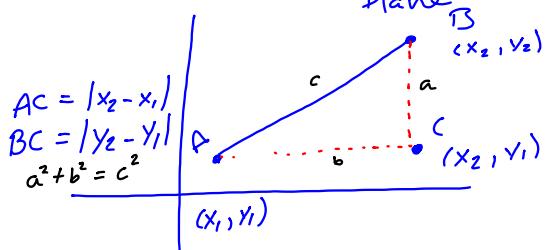

$$x^2 \geq x$$

$$x = \frac{1}{2}$$

$$x^2 = \frac{1}{4}$$

Distance in a coordinate plane

$$AC = |x_2 - x_1|$$

$$BC = |y_2 - y_1|$$

$$a^2 + b^2 = c^2$$

$$\begin{aligned} BC^2 + AC^2 &= AB^2 \\ \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} &= \sqrt{AB^2} \\ d_{AB} &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \\ \text{Distance Formula} \end{aligned}$$

$$A = (1, 3) \quad B = (5, 6) \quad C = (-3, 0) \quad D = (-7, 3)$$

Find AB, BC, CD

$$\begin{aligned} AB &= \sqrt{(5-1)^2 + (6-3)^2} \\ &= \sqrt{4^2 + 3^2} \\ &= \sqrt{16+9} \\ &= \sqrt{25} \\ AB &= 5 \end{aligned}$$

When the distances are the same we say that

$$AB = CD \rightarrow$$

$$\overline{AB} \cong \overline{CD} \rightarrow$$

$\cong$  (congruent)

Given points  $P, Q, R$   
Is  $PQ \cong QR$

$$P(-1, -6) \quad Q(-8, 5) \quad R(3, -2)$$

$$PQ = \sqrt{(-8+1)^2 + (5+6)^2} \quad QR = \sqrt{(3+8)^2 + (-2-5)^2}$$

$$= \sqrt{7^2 + 11^2} \quad = \sqrt{11^2 + 7^2}$$

$$= \sqrt{49+121} \quad = \sqrt{170}$$

$$= \sqrt{170} \quad \text{YES}$$
