

## Proofs

$$2x - 5 = 11$$

Properties

## Algebraic Proofs

Logical Order  
'makes sense'

Two-Column

step	Justification
------	---------------

Solve for x when  $2x - 5 = 11$ 

1. $2x - 5 = 11$ <span style="color: red;">+5 +5</span>	1. given
2. $\frac{2x}{2} = \frac{16}{2}$	2. Addition (5)
3. $x = 8$	3. Division (2)

Algebraic Properties of Equality  
 $a, b, c$  are real numbers s.t.if  $a = b$  then  $a + c = b + c$ 

Addition prop of =

if  $a = b$  then  $a - c = b - c$ 

Subtraction prop of =

if  $a = b$  then  $ac = bc$ 

Multiplication prop of =

if  $a = b$  and  $c \neq 0$  then  $\frac{a}{c} = \frac{b}{c}$ 

Division Prop of =

Reflexive Prop of =  
(Everything is equal to itself)

$$a = a$$

Symmetric Prop of =

If  $a = b$  then  $b = a$ 

Transitive Prop of =

If  $a = b$  and  $b = c$  then  $a = c$ 

Substitution Prop of =

If  $a = b$ , then  $b$  can  
be replaced by  $a$  whenever  
 $b$  appears

Distribution Prop of =

if  $a(b \pm c)$  then  $ab \pm ac$ if  $ab \pm ac$  then  $a(b \pm c)$

Solve for x when  $3x + 12 = 8x - 18$

- |   |                               |
|---|-------------------------------|
| 1. $3x + 12 = 8x - 18$<br><u><math>-3x</math></u> <u><math>-3x</math></u> | 1. given                      |
| 2. $12 = 5x - 18$<br><u><math>-18</math></u> <u><math>+18</math></u>      | 2. Subtraction prop of $(3x)$ |
| 3. $30 = 5x$<br><u><math>5</math></u> <u><math>5</math></u>               | 3. Addition prop of $(18)$    |
| 4. $6 = x$  | 4. Division prop of $(5)$     |

Given the equation  $a = \frac{24}{500}c - 1$   
solve for c

- |  |                                  |
|--|----------------------------------|
| 1. $a = \frac{24}{500}c - 1$<br><u><math>+1</math></u>                                   | 1. given                         |
| 2. $(a+1) = (\frac{24}{500}c)$<br><u><math>500</math></u> <u><math>\times 500</math></u> | 2. Addition prop $= (1)$         |
| 3. $500(a+1) = \frac{24c}{24}$<br><u><math>24</math></u> <u><math>24</math></u>          | 3. Multiplication prop $= (500)$ |
| 4. $\frac{500(a+1)}{24} = c$   | 4. Division Prop $= (24)$        |

$$3(2z - 4) - 6 = 2z + 7$$

- |                             |                                 |
|-----------------------------|---------------------------------|
| 1. $3(2z - 4) - 6 = 2z + 7$ | 1. Given                        |
| 2. $6z - 12 - 6 = 2z + 7$   | 2. Distribution Prop of $=$     |
| 3. $6z - 18 = 2z + 7$       | 3. Simplify like terms          |
| 4. $4z - 18 = 7$            | 4. Subtraction Prop of $= (2z)$ |
| 5. $4z = 25$                | 5. Addition Prop of $= (18)$    |
| 6. $z = 6.25$               | 6. Division Prop of $= (4)$     |

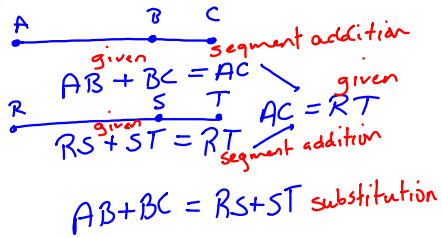

### Properties of Equality

- |            | Segment                                    | Angle  |
|------------|--|--|
| Reflexive  | $AB = AB$                                  | $m\angle A = m\angle A$  |
| Symmetric  | $AB = CD$<br>then $CD = AB$                | if $m\angle A = m\angle B$<br>then $m\angle B = m\angle A$                           |
| Transitive | if $AB = CD$ , $CD = EF$<br>then $AB = EF$ | if $m\angle A = m\angle B$ , $m\angle B = m\angle C$<br>then $m\angle A = m\angle C$ |

$$m\angle A = 30^\circ, m\angle A = m\angle B$$

$$m\angle B = 30^\circ \quad \text{Transitive}$$

### Segment Addition

$\angle 1, \angle 2$  are complementary = def of comp  
 $\angle 3, \angle 4$  are complementary = def of comp  
 $m\angle 2 = m\angle 3$  given  
 $m\angle 1 + m\angle 2 = 90^\circ$  angle addition  
 $m\angle 3 + m\angle 4 = 90^\circ$  angle addition  
 $m\angle 1 + m\angle 2 = 90^\circ$  substitution  
 $m\angle 1 + m\angle 3 = 90^\circ$  substitution  
 $m\angle 1 = 90^\circ - m\angle 3$  subtraction  
 $m\angle 1 = m\angle 4$  Transitive prop of  $\angle$ 's
