

10.5 Solid Figures

Three dimensional figure
that encompasses space

5 types by definition

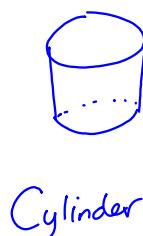

If two sides are parallel and
congruent

Prism

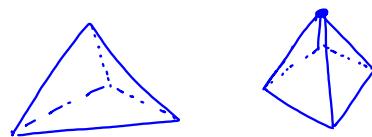

1. 2 equal polygons on bottom and top (bases)
2. Sides are rectangles

bases are congruent
and parallel
By definition not a
prism

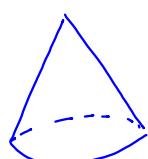

Cylinder

1. Bases that are congruent
parallel circles
2. Side is a rectangle

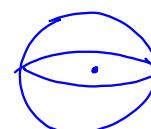

Pyramids

1. Only one base
2. Sides are triangles and
they all have a common vertex

Cone - 1 base
that is a circle
side not triangle

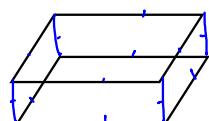

Sphere
- No base

2 bases	1 base	No base
Rectangle sides	Triangle Sides	?
Polygon Prism	Polygon	Cone
Circle Cylinder		Sphere

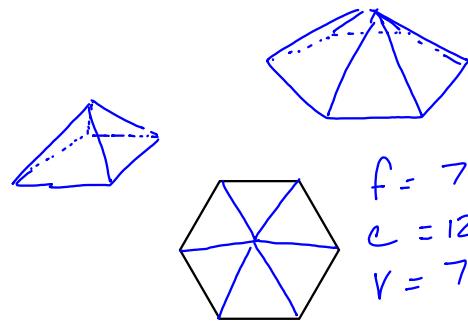

Faces - Flat surface

Edges - Line segments
(where flat surfaces intersect)

Vertices - Corners
(where line segments intersect)

6 Faces
12 Edges
8 Vertices

$$f = 7$$

$$e = 12$$

$$v = 7$$

P 543 - 544

1 - 20 all
26 - 29 all
