

### 9.3 Classify Angles

Angles are classified into 4 groups

$\angle ABC$  acute  
 $\angle CBD$  obtuse  
 $\angle EBD$  Right  
 $\angle EBA$  (Right)  $180^\circ - 90^\circ = 90^\circ$   
 $\angle DBA$  straight

### Angle Relationships (Pairs)

#### Vertical Angles

- When two lines intersect the angles opposite each other are vertical angles  
 $\angle 1, \angle 3$  are vertical angles  
 $\angle 2, \angle 4$  are vertical angles

#### Complimentary

Two angles whose sum is  $90^\circ$

Because it's the Right thing to do

$m\angle 1 = 15^\circ$   $m\angle 2 = 75^\circ$   
 $\angle 1, \angle 2$  complimentary  
 $m\angle 1 = 21^\circ$   $m\angle 2 = 69^\circ$   
 $\angle 1, \angle 2$  are  
 $m\angle 1 = 55^\circ$   $m\angle 2 = 45^\circ = 100^\circ$   
 $\angle 1, \angle 2$  are not

$\angle A$  and  $\angle B$  are complimentary  
 $m\angle A = 39^\circ$  What is  $m\angle B$   
 $m\angle A + m\angle B = 90^\circ$   
 $39 + m\angle B = 90^\circ$   
 $m\angle B = 51^\circ$

Supplementary <sup>1</sup> supplements  
Two angles whose  
sum is  $180^\circ$

$$m\angle 1 = 45 \quad m\angle 2 = 135$$

$\angle 1, \angle 2$  are

$$m\angle 1 = 91 \quad m\angle 2 = 91 \quad = 182$$

$\angle 1, \angle 2$  are not

$\angle A$  and  $\angle B$  are Supplementary  
 $m\angle A = 109^\circ$  what is  $m\angle B$   
 $180^\circ - 109^\circ = 71^\circ$   
 $m\angle B = 71^\circ$

$$7467 - 468$$

2-36 even
